

OPT-RX WB1 HV

Wide fibre

Wide Fibre receiver which converts the optical signal coming from the **OPT-TX WB1** transmitter to coaxial; it has **3 outputs: 2 wideband V and H satellite polarities and the TV signal.**

The Wide Fibre solution allows you to transport the signals of **one satellite dish** and the entire **TV band**, including **FM and DAB** radio signals.

They are equipped with **3 separate photodiodes** that can manage the **2 wideband polarities** and the TV signal separately and use the **Coarse Wavelength Division Multiplexing (CWDM)** technology to demix the different wavelengths.

Technical Chars

- Wideband optical receiver with the **single satellite** outputs (V, H) and separate **TV, DAB and FM** signal
- **Extremely reduced size**
- **Integrated AGC** for maximum stability of the RF output signal
- **Status LEDs for each output** for quick diagnostics
- **Extended optical input range (-5dBm to -16dBm)** for maximum quality with up to 1x64 optical splitting
- Dedicated optical wavelength for each satellite wideband polarity and TV band
- The optical receiver feeds through the coaxial output connectors
- Recommended auxiliary power supply: **PSU1508F (287760)** or **PSU1215FA (code 287551)** in the UK
