

SWI8508 dSCR UK

SCD2 (dCSS) Multiswitches

5-input cascadable SCD2 (dCSS) multiswitch with adjustable active inputs with CAG; compatible also with Wideband LNBs; 8 output taps with 16 frequencies each and operating mode autodetection, entirely fed by DC-IN connector, VL line or by the receivers. SKY Italian and SKY UK frequencies.

Technical Chars

- Series with **4 satellite inputs and 1 TV input, 5 pass-through outputs and 4 or 8 user extensions**, 4 SCR tuners and 12 SCD2 dCSS tuners simultaneously for each output.
- Compatible with both traditional LNB (**UX-QT LTE**) and **Wideband** type LNB (**UX-WB LTE**) to distribute the **4 polarities of a satellite with only two cables**.
- **Active and adjustable TV input** to mix DTT and Satellite signals in distribution.
- **Automatic Gain Control (CAG)**: maintains adequate output signal (95dBμV) even when input signal strength varies.
- **High Satellite level and separate adjustment** for each output.
- **Autodetection of the operating mode** depending on the STB connected to the port; this allows switching from a Legacy STB to an SCR or SCD2 without making any intervention on the system. The multiswitch automatically starts in **Legacy** mode and switches to **SCR or SCD2** mode as soon as it detects a DiSEqC command from it.
- Low handover loss.
- DC pass-through on all satellite ports for maximum compatibility with existing systems.
- **FVM Flexible Voltage Management** allows the multiswitch to be powered in different modes without having to act on a dip switch.
- **Universal standard**: compatible with both the **SCR/SCD** and **SCD2** frequencies used by SKY and Tivùsat, as well as the **dSCR UK** standard.
- **Power supply not included PSU3001** with DC inserter on F connector to power the LNB, headend amplifier (if any) and multiswitch when the decoder cannot support the load of the extension.
