

CT-BUS

Dialers

The CT-BUS is a digital telephone dialer, with built-in voice synthesis, for transmission over a PSTN telephone line of alarm and system status information. The CT-BUS can communicate either through pre-recorded voice messages or through digital protocols. It allows remote management of all wired control panels of the Defender system, to which it connects via bus. It is possible to house the dialer directly in the control panel or to remote it with optional MOD-BOX and CE64BOX containers. CT-BUS also allows the locking of electronic keys associated with a Defender system, a useful function in case of lost or stolen keys. The CT-BUS combiner can be integrated with the ESP-CT-GSM add-on module to extend its use on the GSM network as well.

Technical Chars

- Alarm transmission using Fast Format and Contact ID digital protocols
- 32 alarm voice messages, 16 of which can be stored by the user
- 32 freely programmable alarm channels expandable to 40 with the ESP-CT-GSM module
- Address book with 64 phone numbers freely assignable to channels
- 3 configuration modes: Via a normal key telephone with DTMF tones following the voice menu instructions / Via the T8N system keypad installed in the system / Via PC using the MOD-USB interface module
- Ability to manage configuration changes via modem using Programmer Software Security.

CT-BUS		
Code		910304
Battery	V/Ah	12/1.2
Operating temperature	°C	5 to +50
Dimensions and packaging		
Pieces		1
EAN code		8016978083923
Packaging dimensions	mm	162 x 111 x 40
Product dimensions	mm	110 x 90 x 25
Packaging weight	kg	0.2
Weight	kg	0.080
