

CT-BUS GSM

Dialers

The CT-BUS GSM is a digital telephone dialer, with built-in voice synthesis, for transmitting alarm and system status information over a GSM telephone line. The CT-BUS GSM can communicate either through pre-recorded voice messages or through digital protocols, or SMS messages. It allows remote management of all Defender control panels, to which it connects via bus. It is possible to house the dialer directly in the control panel or to remote it with optional MOD-BOX and CE64BOX containers. CT-BUS GSM also allows the locking of electronic keys associated with a Defender system, a useful function in case of lost or stolen keys.

Technical Chars

- Alarm transmission via digital protocols
- 40 freely programmable alarm channels with voice messages
- Address book with 64 phone numbers freely assignable to channels
- Configuration mode via the T8N keypad installed in the system or from the PC using the MOD-USB and the Security Programmer
- Automatic function of choosing the best GSM cell at adjustable intervals (2 to 24 hours)

CT-BUS GSM		
Code		910366
Battery	V/Ah	12/1.2
Operating temperature	°C	5 to +50
Dimensions and packaging		
Pieces		1
EAN code		8016978098767
Packaging dimensions	mm	180 x 152 x 45
Product dimensions	mm	112 x 88 x 20
Packaging weight	kg	0.2
Weight	kg	0.185
