

M8UBUS

Expansion modules

The M8IBUS module is an 8-output board that allows expansion of Defender 64 control panels by connecting directly to the control panel bus. The module can be installed directly in the control panel or inside the MODBOX and CE64BOX enclosures. This module allows you to control devices external to the security system to create home automation features such as opening and closing shutters , blinds, turning on lights,irrigation management, automation control, etc. Commands can be given manually via Keyboard, PC, phone, smartphone and Tablet or managed automatically with the help of the Time Programmer

Technical Chars

- Equipped with 2 relay outputs to 6 open collector outputs
- Removable terminal block
- Terminal block for tamper protection
- By dip switch the module can be reduced from 8 to 4 outputs to make installation more flexible where needed.
